ABSTRACT:

PURPOSE: To grasp accurately each terminal equipment requesting a communication charge required for transmission of a text by adding charge notice information noticed from an ISD network for each of terminal equipments making request of texts and transmission when a facsimile text is sent and printing out the result.

CONSTITUTION: A main control section 2 manages a destination relating to communication, a document number, communication result, and communication page number or the like and also charge information 11 from a communication control section 11 for each communication as communication management information. Furthermore, the main control section 2 adds the charge information 11 in the communication management information for each terminal equipment making a request of text storage and transmission on request. The charge information 12 being the result of addition for each terminal equipment making a request of text storage and transmission is outputted by a print edit section 3. The print edit section 3 makes formatting the charge information 12 added by each terminal equipment into a format for print by a printer and the result is printed out by an externally mounted printer 5 via a printer interface section 4.
